WRI partners with the Ministry of Environment, Nature Conservation and Tourism (MECNT) to develop the Interactive Forest Atlas of the Democratic Republic of Congo and to build the capacity of forest stakeholders in remote sensing, GIS, and forest information management. This partnership aims to strengthen forest management and land use planning by bringing all major land use categories onto the same platform.

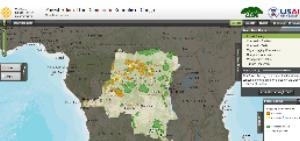

The Interactive Forest Atlas of the Democratic Republic of Congo is updated as new information becomes available, with periodic publications of the data and database made publicly available through Atlas overview reports, posters, and online and offline mapping applications.

Global Forest Watch User Survey

1. How would you rate the usability of the Global Forest Watch website?

	VERY GOOD	GOOD	AVERAGE	POOR	VERY POOR	DIDNT USE
MAP	<input type="radio"/>					
COUNTRIES	<input type="radio"/>					
SUBMIT YOUR STORY	<input type="radio"/>					
BLOG	<input type="radio"/>					
DATA	<input type="radio"/>					

2. Was the information provided by Global Forest Watch useful for your work? How do you plan to use the information?

(Text area for answer)

3. How can we improve Global Forest Watch?

(What features could be improved? How could the website be more useful to you?)

(Text area for answer)

4. Did you encounter any bugs on the Global Forest Watch site?

(If so, please report so we can address the issue)

(Text area for answer)

5. What is the name of your organization?

(Text area for answer)

6. How would you describe your organization?

- GOVERNMENT
- BUSINESS
- NGO
- MULTILATERAL
