A close-up photograph of a person's hands holding a mobile phone. The person is wearing a grey t-shirt with a red logo on the sleeve. To the left, a black computer monitor is visible, with a blue box labeled 'VTUX' and 'VI-KO' on top. The background is a textured, light-colored wall. The overall scene suggests a person working on a computer or using a mobile device in a field or office setting.

INVISIBLE CHILDREN

Early Warning Network & The LRA Crisis Tracker

Jean de Dieu Kandape

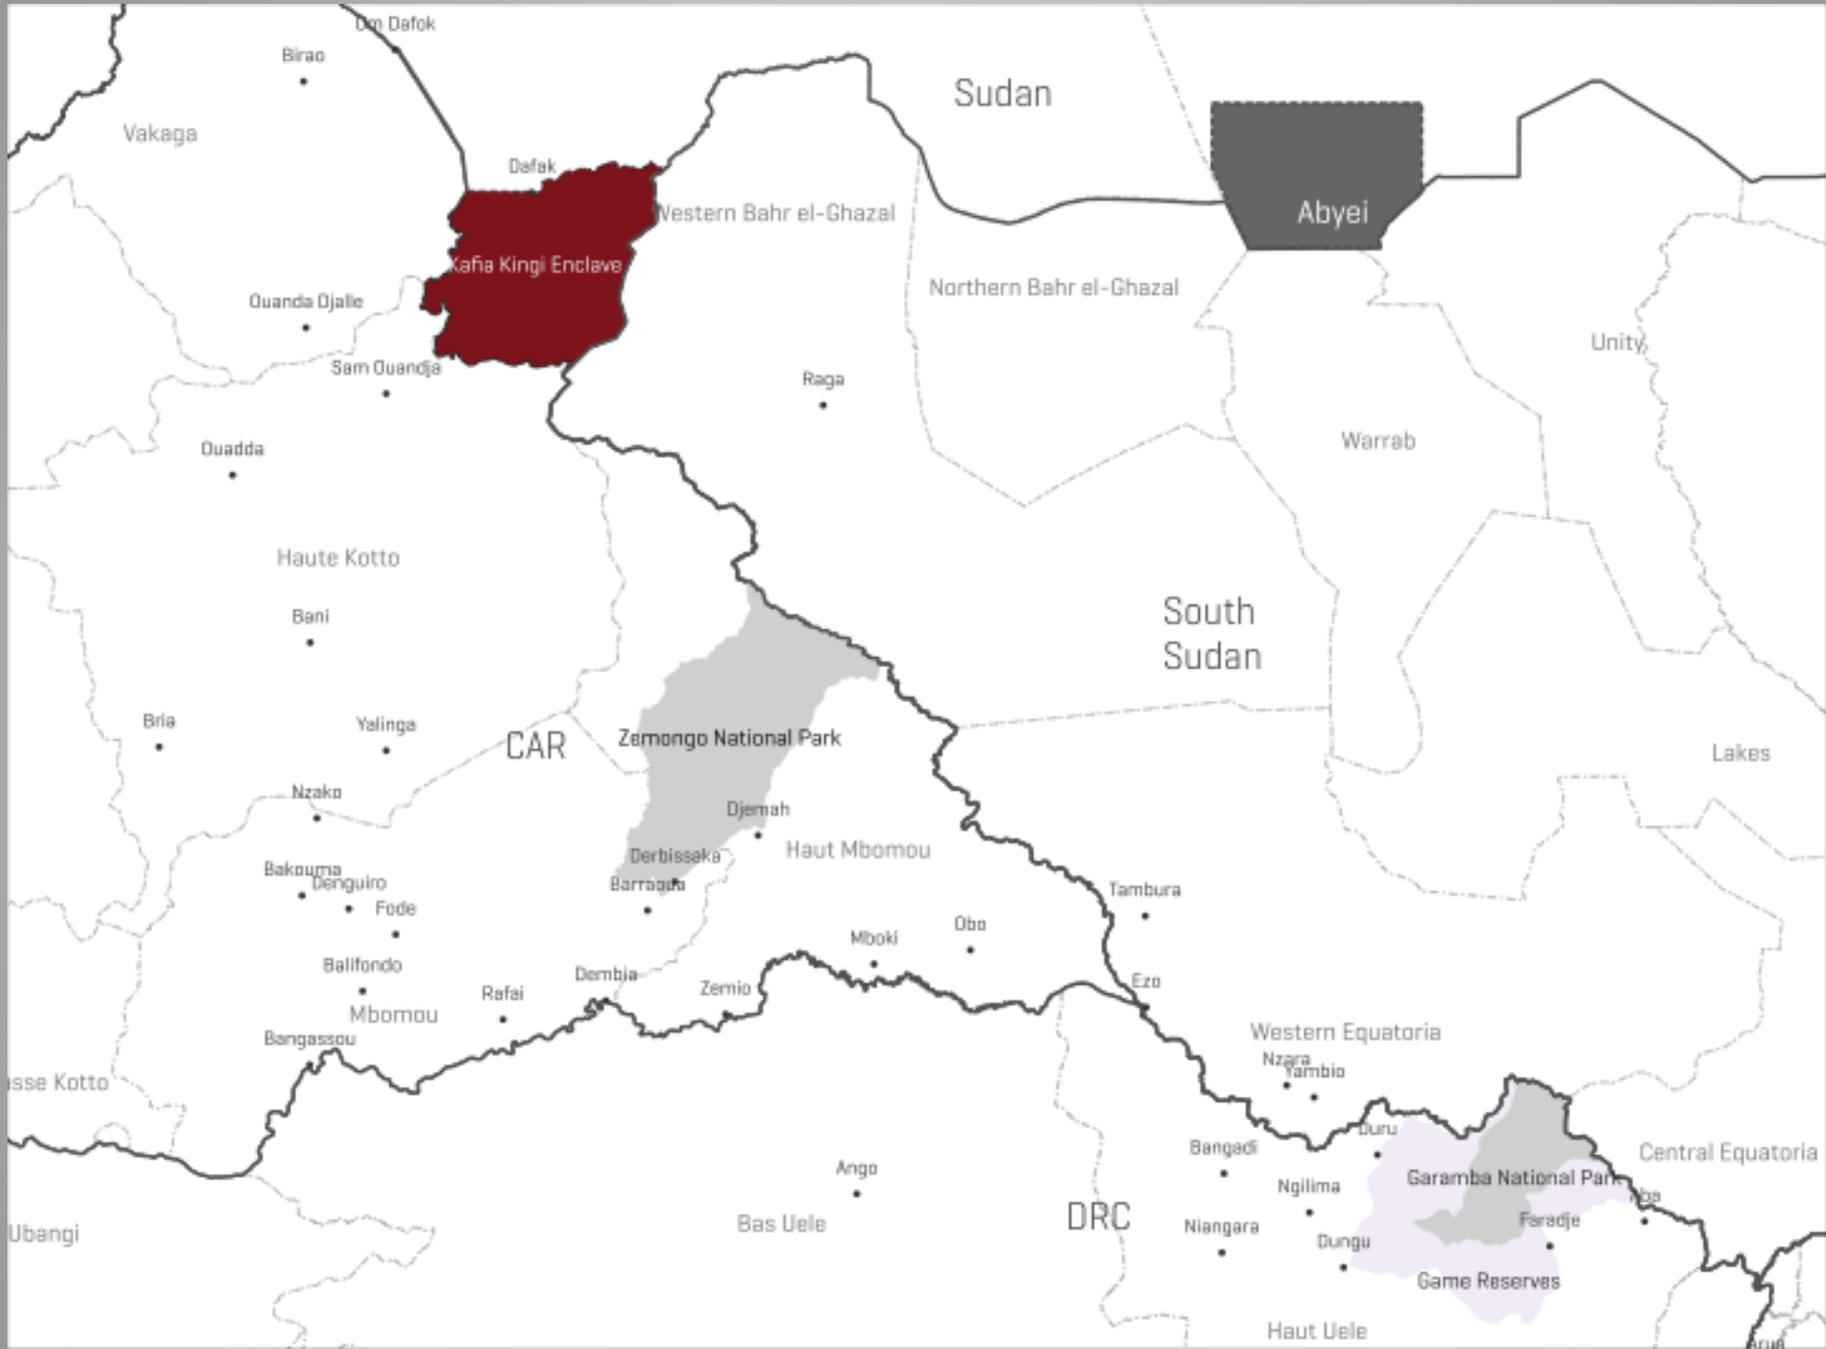

“We have been forgotten. It’s as if we don’t exist. The government says the LRA are no longer a problem, but I know that’s not true. I beg of you, please talk to others about what has happened to us.”

-- Traditional Chief from Niangara, DRC
February 19, 2010

Invisible Children

- Founded in 2005 with a mission to permanently end LRA violence
- Operational in highly remote areas of central Africa
- Our initiatives include:
 - Community-based protection
 - Security reporting & analysis
 - Defection rebel combatants
 - International political advocacy
- Our work is increasingly addressing insecurity and exploitation beyond the LRA (including poaching)

Early Warning Network

- Built upon an **existing local network** run by Catholic Church
- Designed to address the **severe isolation** between communities
- Became a way for communities to **talk to the “outside world”**
- Now a **“vertically-integrated” pipeline** of information and analysis

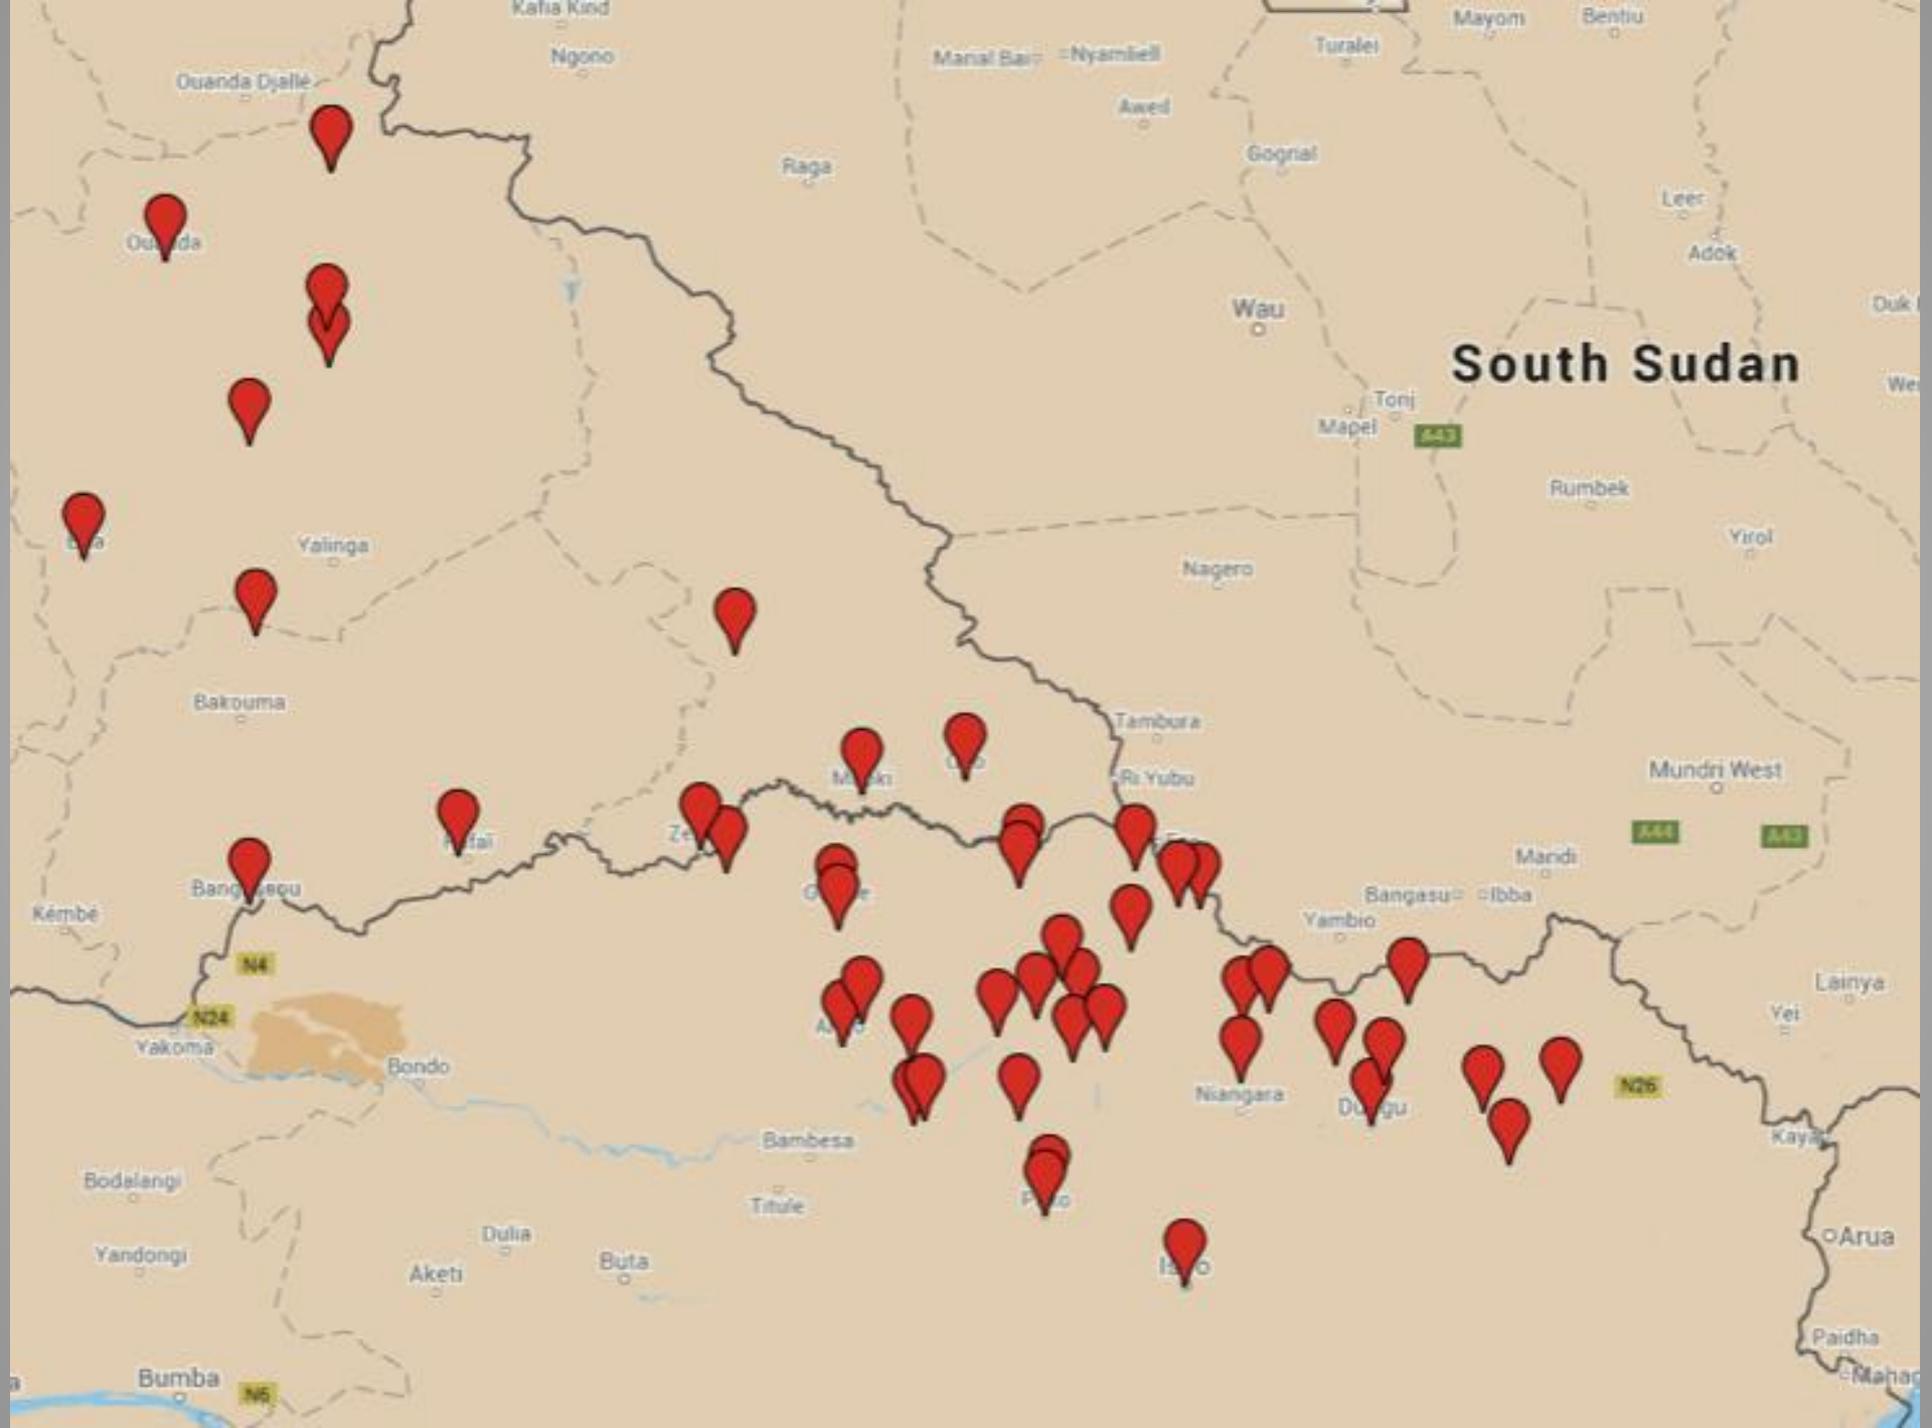

How It Works

- **High frequency (HF)** two-way, long range radios
 - Communicate via a shared frequency
 - Multiple radios can communicate at once
- Managed by **Local Protection Committees**
 - Diverse spectrum of community volunteers.
 - Includes at least 2-3 HF radio operators
 - Trained by Invisible Children & partner organizations
- Requires **thorough training** of community volunteers
 - HF radio maintenance
 - Quality information collection & reporting
 - Contingency planning in the event of security threat

Scope of the Network

- About **50 communities** across DRC and CAR.
- In CAR: Combination of HF radios **and satellite phones** due to insecurity and logistical difficulties
- Currently expanding further into **Haute Kotto CAR, and east of Garamba Park**
- Would like to add more radios in the **Bas Uele area of DRC** (Bili Uele forest)

Early Warning Reports

- Incidents reported during **twice-daily security calls**
 - All communities on the call hear each report
- Reports aggregated by **hub radio operators**
 - Hub operators clarify and document all reports
 - Morning calls are usually the initial incident reports.
 - Afternoon calls provide additional information and updates.
- Hub operators send reports to **Crisis Tracker analysts**
 - Actionable reports immediately shared with security actors in the field (Military, Park Rangers, Peacekeepers)
 - All vetted reports are translated, shared via **an EWN listserv**

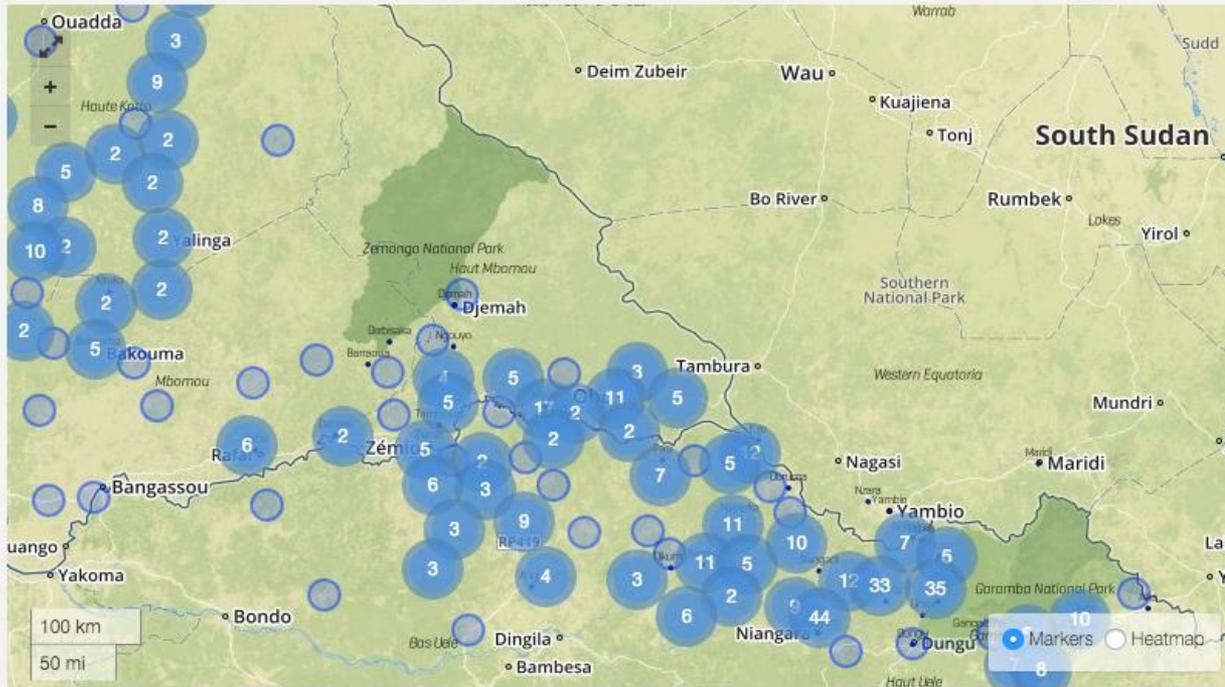

Early Warning Reports

- Step 1: Incidents reported during **twice-daily security calls**
- Step 2: Reports aggregated by **hub radio operators** in DRC and CAR
- Step 3: Hub operators send reports to our **team of analysts**
- Step 4: Vetted reports are distributed daily via our **EWN listserv** and the **LRA Crisis Tracker**.

- Database | Online Mapping Platform | Analysis Publications
- The Core Team:
 - HF Hub in the field level
 - Project Coordinator based in the field
 - 3-4 analysts stationed internationally
- Designed to inform policymakers and practitioners.

Supporting Wildlife Protection

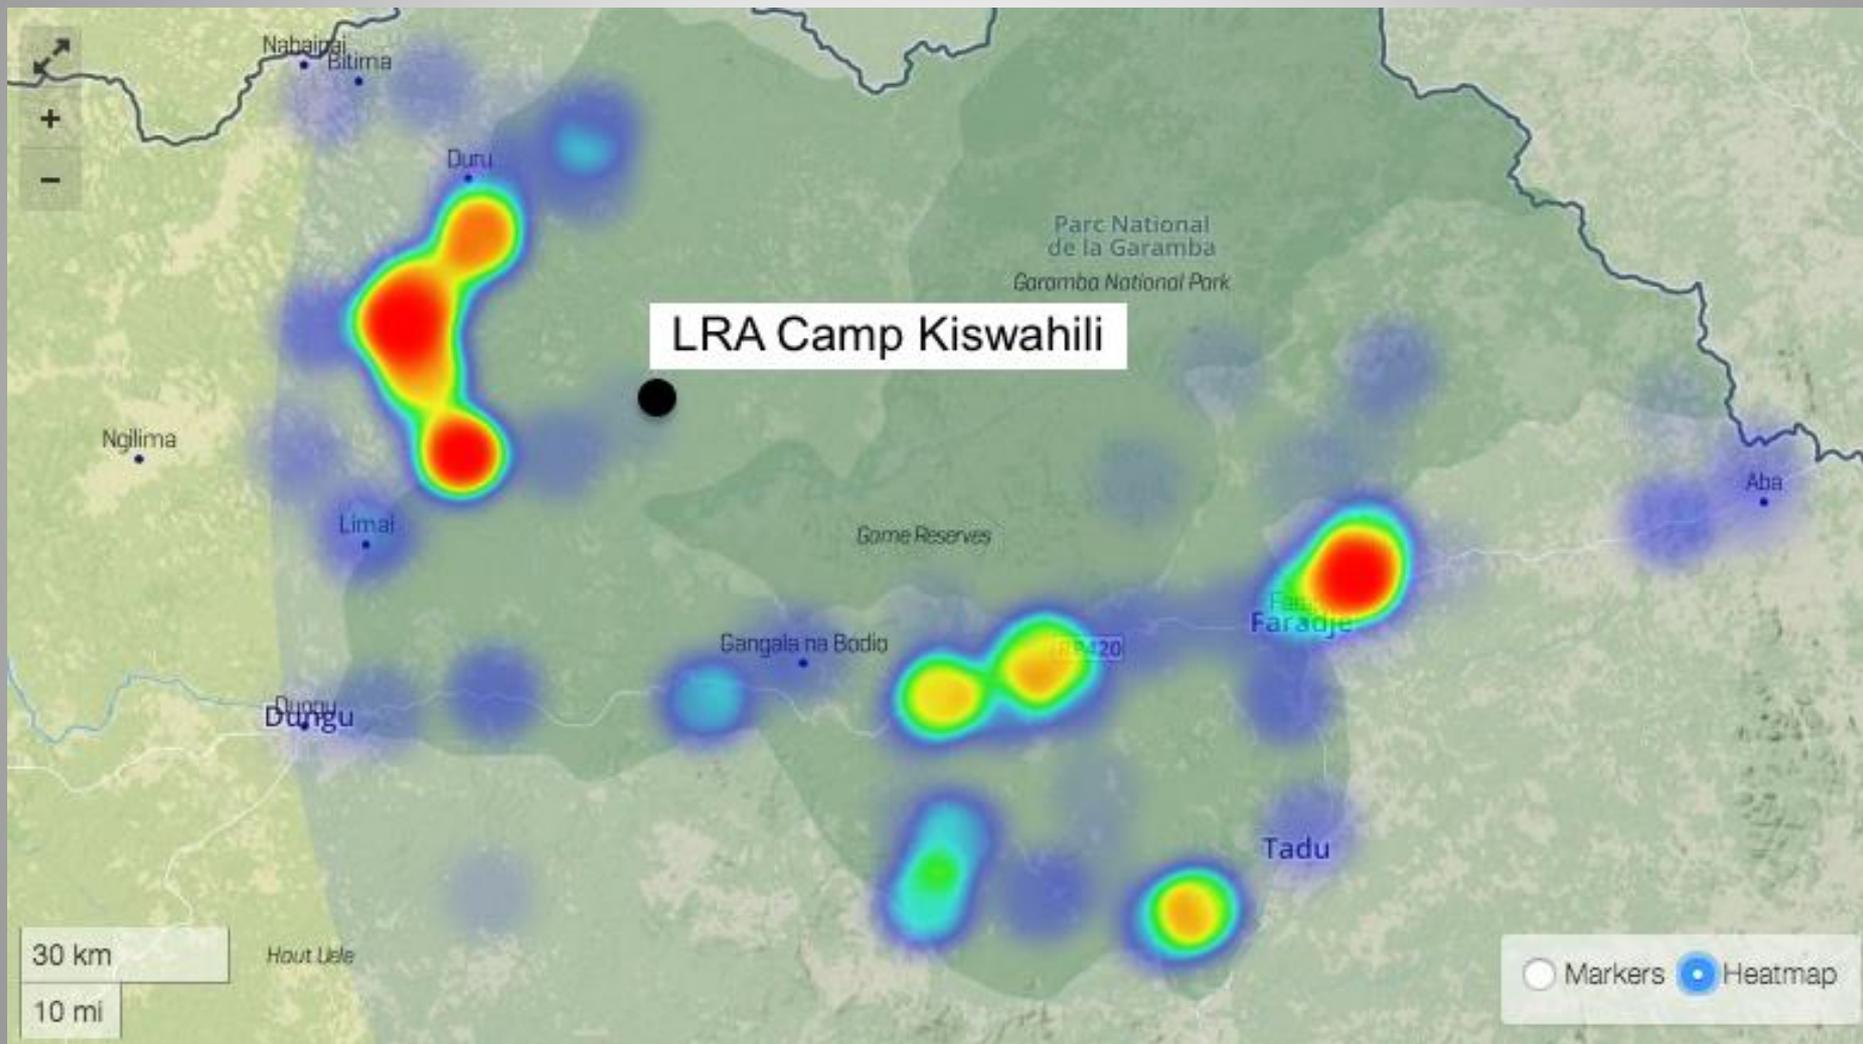

- The LRA is a poaching actor in DR Congo and uses ivory trafficking as a means to sustain itself
- Communities report poaching information over the Early Warning Network
- The armed groups that pose the greatest threat to human security in the region are all engaged in poaching and wildlife trafficking as a source of revenue which funds more violence

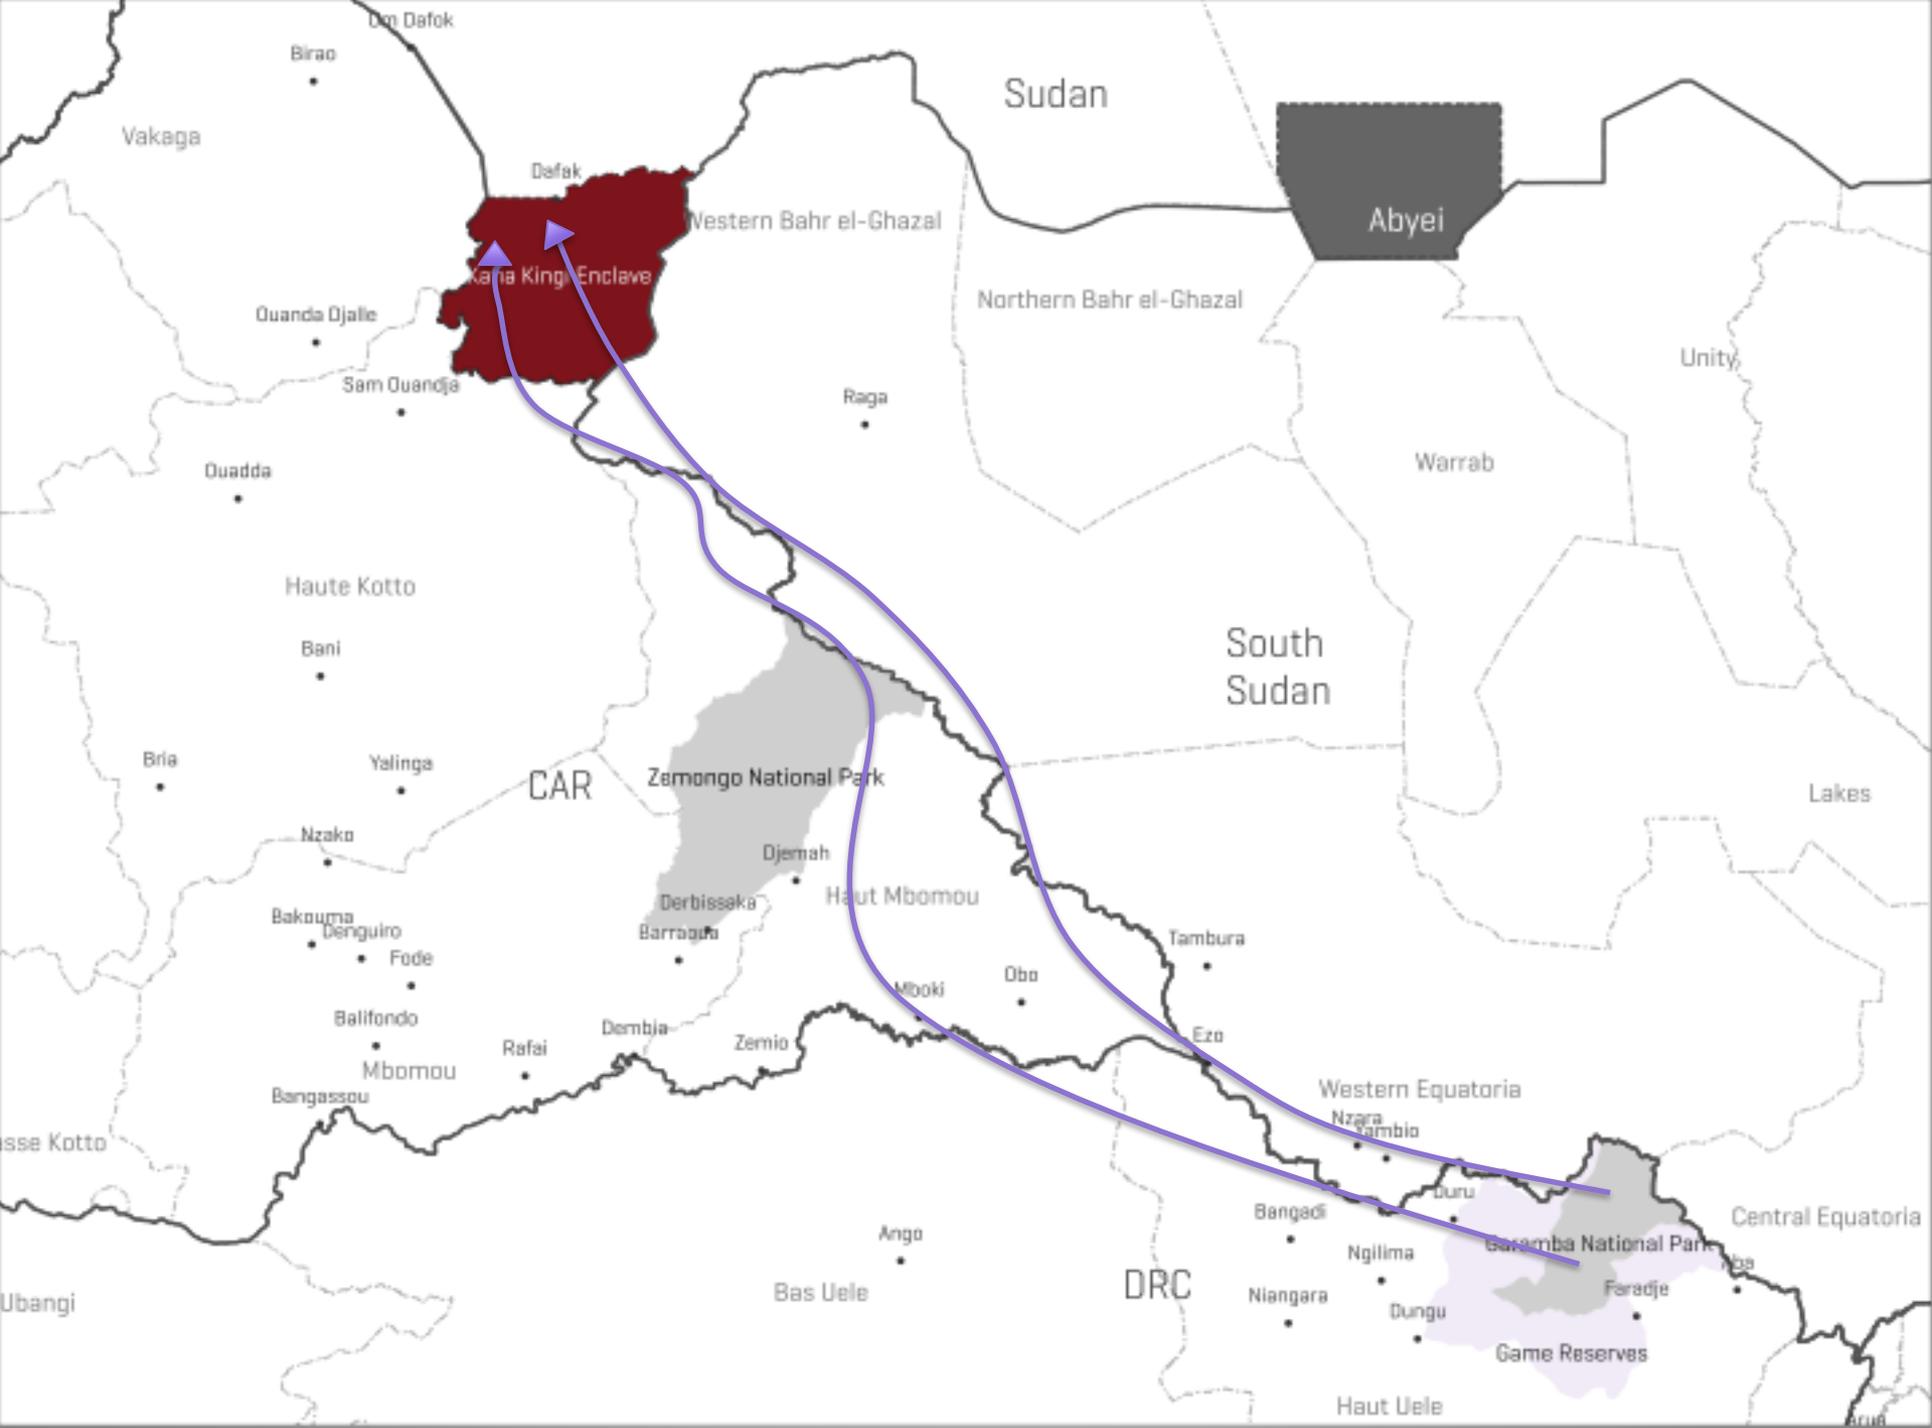

Correlation of LRA poaching & violence against civilians in Garamba, DRC (2012-2016)

Map of LRA Attacks in Garamba Park Vicinity January 2012–April 2016

Cross-Cutting Best Practices

- Community Participation
 - Requires trust and buy-in.
 - Self-selected, diverse community mechanisms
- “Vertical Integration” of Information
 - “Low-tech” context-appropriate communications infrastructure + “high tech” analysis platforms
 - Have a presence at every level
- Information-sharing must be *reciprocal*

Fin!

Merci beaucoup,
Asante sana,
Matondo mingi
